AST Networks

PRESS RELEASE

Strategic Partner Event to Strengthen Government Relations and Drive Growth in Critical Communications

For immediate release | Worldwide | July 2025

AST Networks, a leading provider of advanced satellite and hybrid communications solutions, have announced they are hosting a partner event in September, bringing together key industry players, technology innovators, and government focussed organisations. The event will address the rapidly evolving needs of secure, reliable, and scalable communications – particularly in government and critical operations – and explore new ways to help partners grow and succeed in this demanding sector.

With global demand for resilient, secure, and interoperable communications on the rise, governments and defence organisations are increasingly looking for trusted technology partners who can deliver end-to-end connectivity solutions that perform in even the most challenging environments. This event will provide AST Networks' partners with insight, expertise, and direct access to leading manufacturers, enabling them to strengthen their own market position and government relationships.

The one-day event will feature keynote discussion on competitive success in complex markets, updates on satellite technology across GEO, LEO, and NTN, along with practical sessions on secure communications solutions for conflict and disaster zones. Attendees will also have the opportunity to network with leading manufacturers such as Iridium, Thuraya, Viasat, Cobham, SAL Navigation, Airbus, and others.

Lee Norton, General Manager of AST Networks Partners, said: "Secure and reliable communications are critical to government operations and humanitarian response, our partners play an essential role in bridging the gap between advanced technology and those who need it most. This event is about equipping our partners with the insights, solutions, and connections they need to succeed, whilst strengthening their ability to support government and defence agencies around the world."

The event underscores AST Networks' commitment to partner-led growth, providing the tools, knowledge, and strategic support needed to help their network of trusted partners deliver secure, innovative, and scalable communication solutions.

Event Highlights:

- Technology updates from leading providers on GEO, LEO, and NTN advancements
- Secure solutions for conflict zones, anti-jamming and spoofing mitigation
- Networking sessions with key technology manufacturers and government-focussed stakeholders

Secure Your Invitation

This prestigious, invitation only event, offers the opportunity for AST Networks partners to gain first-hand insights into the latest advancements in satellite and hybrid communications, meet directly with industry-leading

manufacturers, and strengthen strategic relationships with government and defence stakeholders. By attending, partners will not only enhance their technical knowledge but also unlock new avenues for collaboration, growth, and influence within this critical sector.

Attendance is strictly by invitation only to ensure a focussed and high-value experience for all participants. Partners who wish to secure their place can contact their AST Networks Account Manager, or visit here to register their interest.

Event Details

The AST Networks Partner Event will take place on 30th September 2025 at the Park Plaza Victoria, Amsterdam, conveniently located opposite Amsterdam Central Station. This central and easily accessible venue will provide the ideal setting for a day of strategic insights, networking, and collaboration.

About AST Networks

As a global leader in satellite and hybrid communications, delivering cutting-edge solutions that empower governments, defence agencies, and commercial enterprises, AST Networks combines innovation, expertise, and trusted partnerships to deliver secure and resilient communications worldwide.
